3、常见故障排除 Common Troubleshooting

◆ 开机无显示：先关机，打开背板上 AC 220V 插座的保险丝盒，检查保险丝是否烧断，可更换保险。

Boot no display: first off, open the socket on the back panel AC 220V fuse box, check the fuse box, you can replace insurance.

◆ 屏幕突然黑屏：可按复位键，重新开始测量。

The screen suddenly black screen: press the reset button, to start measurement.

◆ 测量及运算结果不正确：检查外部接线，是否按说明书操作，是否有接触不良或接错线；相关参数设置不正确。

Measurement and computation results are not correct: Check the external wiring, whether by manual operation, whether bad or take the wrong line; relevant parameter is incorrect.

测量电压正常而电流显示为零，请检查该电流档保险管是否熔断

Measuring voltage and current display to zero the normal, check whether the current file fuse blown
